

Data Protocol

Learning Targets

- I can identify the five steps of data protocol
- I can evaluate different instructional strategies based on data supported effectiveness
- I can discuss with my PLC different instructional strategies and theorize why some are more effective than others

Objective

- At the end of this PD you will walk away with an instructional strategy that you and your PLC agree to all use one or multiple times in your next unit

Steps of PLC Data Protocol

1. Data Analysis (2-3 min)
2. Strengths and Weaknesses (8 min)
3. **Instructional Strategies** (18 min)
4. Smart Goal (2 min)
5. Results Indicator (2-3 min)

Evaluating Instructional Strategies

- Are there instructional strategies that all teachers are using in common?
- How are instructional strategies differentiated to meet the needs of multiple learning styles?
- How are common instructional strategies being used as formative assessments?

New Ideas

- Are there instructional strategies that one teacher may be using effectively that others are not?
- Share resources! What may work for them could work for you.

PLC Work

- Begin evaluating instructional strategies to determine if any are common, or could become common
- Discuss any instructional strategies that you are doing but others may not be
- Choose one or two common strategies that each teacher will use during the next unit

Conclusion

- Remember, I am here to help and support you in this!
- If you would like me to work with your PLC directly please let me know on the feedback form
